

Volcanoes

By Jago

What is a volcano?

*A volcano on the surface of a planet or moon that allows material escapes, it causes an eruption . An eruption can be explosive sending material high into the sky. Or it can be **serener** , with gentle flows of material . These volcanic areas usually form mountains built from the many layers of rock , ash or other material that collect around them.*

How does a volcano effect plants and animals?

*Plants are destroyed over a wide area , during an **eruption** . The good thing is that volcanic soil is very rich , so once everything cools of , plants can make a big comeback!*

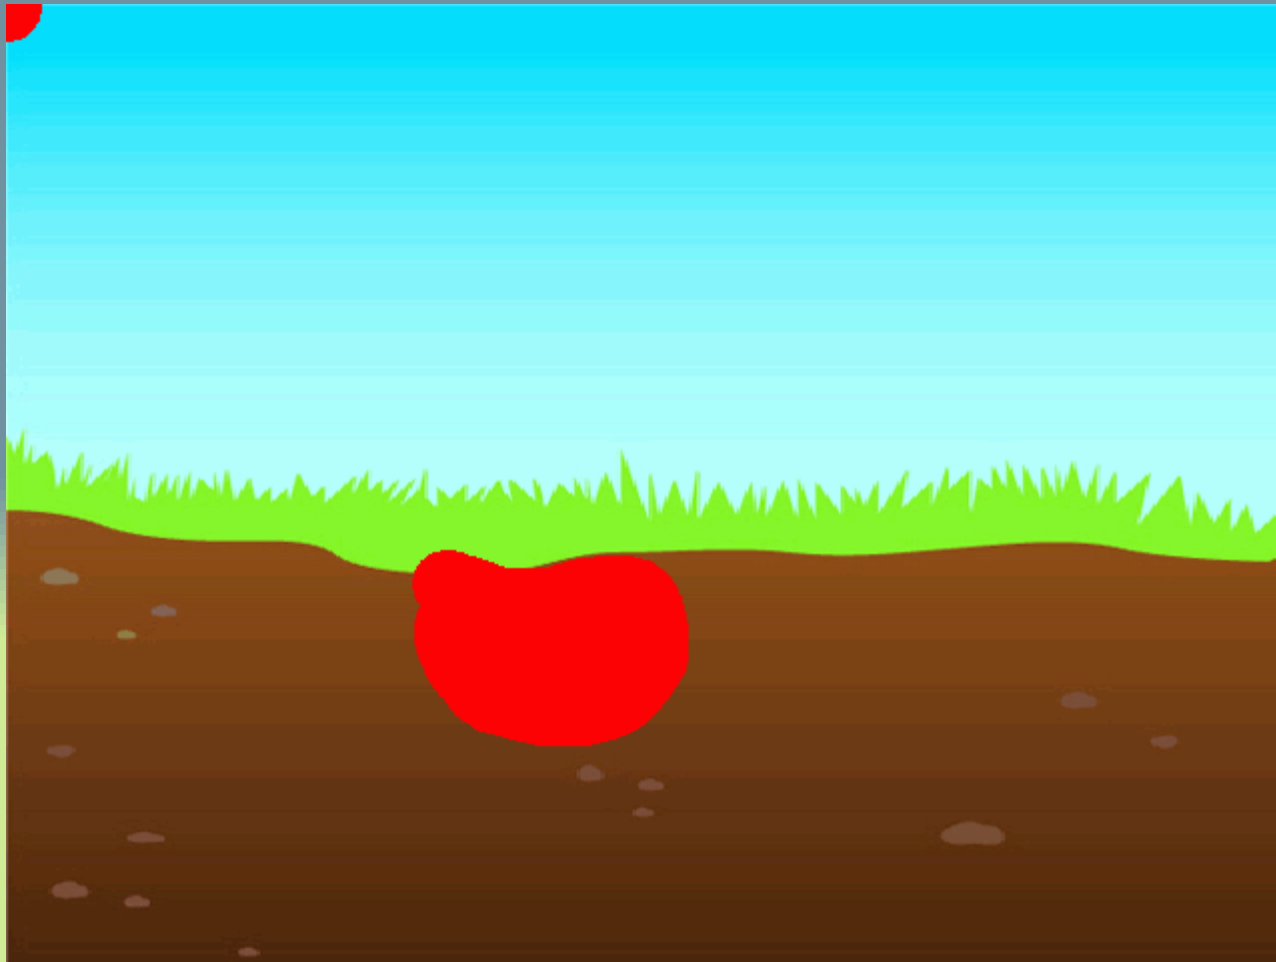

*Livestock and other mammals have been killed by lava flows , **pyroclastic** flows , **tephra** falls , atmospheric effects , gases , and **tsunami**. They can also die from famine , forests fires , and earthquakes . Caused by or related eruptions.*

How is a volcano formed?

Volcanoes are formed when magma from within the earth's upper mantle works its way to the surface. At the surface, it erupts to form lava flows and ash deposits. Over time as the volcano continues to erupt, it will get bigger and bigger.

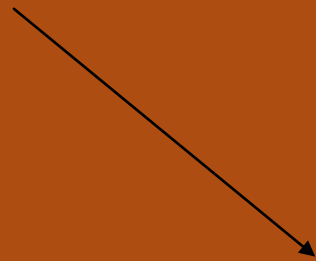

Top 5 famous volcanoes?

- * *Mount Vesuvius.*
- *Krakatoa*
- *Mount Tambora*
- *Mount Loa*
- *Mount Pelee.*
